## Class I Fire Retardant Panels with Excellent RF Performance.

Our RF Friendly Fiberscreen panels are made using Class I Fire Retardant resin and provide the RF performance you need in cell site concealment screening.

Our Peabody Fiberscreen panels are designed to meet increased zoning requirements for cell site antenna screens. We tested our new panel to verify its RF performance and found it to be almost **Loss-less!**

- Class I Fire Retardant resin tested per ASTM E-84 (<25 flame spread)
- Meets CC1 requirements – Self Extinguishing tested per ASTM D635
- Custom molded panels made with FRP pultruded shapes that meet Class I Fire rating.

Now you can specify Peabody Fiberscreen panels for use with iDEN, CDMA, Microwave and everything in between. Our products can be used to meet the strictest of city zoning requirements and are easy to install without unsightly nuts and bolts on the face of the panel.

Call us today for more information or a free sample for your own evaluation.
